The Open COVID Journal

#### THE OPEN COVID JOURNAL

ISSN: 2666-9587

The Open COVID Journal is an international, peer-reviewed, open-access journal dedicated to publishing innovative and impactful research across all aspects of coronaviruses and COVID-19. In light of the rapid and ongoing scientific advances, the journal has broadened its scope to address emerging areas of significance in coronavirus biology, disease pathogenesis, host response, and public health impact.

We welcome a wide range of contributions, including original research articles, letters, reviews/mini-reviews, case studies, clinical trial reports, and guest-edited thematic issues. The journal is committed to the timely dissemination of high-quality findings that advance our understanding and management of coronavirus-associated diseases.

Scope of the Journal Includes:

Coronavirus Biology and Evolution

Origins, genomic diversity, evolution, viral entry mechanisms, replication strategies, and zoonotic spillover dynamics of coronaviruses immune evasion strategies, virus-induced inflammation, (SARS-CoV, MERS-CoV, SARS-CoV-2, and related viruses).

• Pathogenesis and Disease Mechanisms

Multisystem involvement in acute infection, immune dysregulation, vascular and neurological complications, and mechanisms underlying severe disease and mortality.

• Therapeutics and Vaccine Development

Antiviral agents, monoclonal antibodies, immunomodulatory drugs, vaccine design and efficacy, real-world effectiveness, and strategies for serological assays; identification of prognostic and next-generation vaccines.

• Public Health, Epidemiology, and Policy

Surveillance, transmission modeling, outbreak response, vaccine coverage, health disparities, pandemic preparedness, and policy responses.

Global Health and Socioeconomic Impacts

Health system responses, mental health, education, economic recovery, and lessons learned for future pandemic resilience.

Host-Virus Interactions

Innate and adaptive immune responses, cytokine signaling, and host genetic susceptibility factors.

• Post-Acute Sequelae (Long COVID)

Clinical characterization, molecular and immunological underpinnings, impact on quality of life, and strategies for diagnosis and management of long COVID.

• Diagnostics and Biomarkers

Development and validation of molecular, antigen, and predictive biomarkers for disease progression and recovery.

Clinical Trials and Translational Studies

Interventional studies evaluating therapeutic efficacy, vaccine trials, observational cohorts, and translational research bridging bench to bedside.

**IMPORTANT TO KNOW** 

**FREE** Online Journal for all to View

**LOW** Open Access Fees for Authors

**EFFICIENT** Online Submission & Processing

All published content is made freely and globally accessible to support open science and foster collaborative solutions to ongoing and future coronavirus threats.

The Open COVID Journal is an international, peer-reviewed, open-access journal covering all aspects of coronaviruses published continuously by Bentham Open.
